

TOP CULINARY TRENDS 10

1 Must-Try Global Flavors

Diners continue the trend of expanding their culinary horizons, with old standby favorites like Mexican seeing continued growth and other ethnic foods, like Indian reaching the mainstream. A major grocery retailer recently identified flavors from the Pacific Rim (encompassing Asia, Oceania and the western coasts of North and South America) as popular now, with jackfruit serving as a meat alternative, ultra-sweet monk fruit taking the place of refined sugars and vibrantly colored tropical fruits headlining healthy bowls and smoothies.

Also beginning to trend are dishes from the Levantine nations of Lebanon, Syria and Turkey. These have appeared on the menus of trendy restaurants across the United States. Look for sauces like zhug (a spicy hot sauce made with garlic and coriander), toum (a paste of garlic, olive oil and salt), and pomegranate molasses, as well as unfamiliar ingredients like urfa biber (a dried chili pepper with a smoky, raisin-like taste), lavash (a soft, unleavened flat bread) and schmaltz (rendered goose fat) to appear in innovative applications.

OPERATOR IDEAS

Seasoned jackfruit can be prepared as a substitute for pulled pork, fish, and other meats in favorites like barbecue sandwiches, tacos and pizza.

Add guava, dragon fruit and passion fruit to a salad bar or build-your-own healthy bowl or smoothie station!

Replace chorizo with longganisa, a Filipino pork sausage, for a new taste in omelets and breakfast sandwiches.

Purge the Plastic!

Sustainability continues to drive demand for reusable or biodegradable alternatives to single-use plastics. As cities move to ban plastic straws and Styrofoam food containers, “ecologically conscious consumerism” is moving beyond the domain of niche producers to the mainstream, and companies are seeing gains through providing sustainable alternatives. One large supermarket chain now encourages customers to BYOV (bring your own vegetable bag), while producers are bringing to market compostable food wraps made from beeswax and waxed-canvas as well as silicone bags for sandwiches and snacks. With the commitment to a plastic-free world spanning generations from baby boomers to Gen Z, consumer demand will continue to drive the development of new, earth-friendly products. Entegra promotes ecological sustainability through many supplier programs available to our Program Participants, from biodegradable takeout containers to stylish planet-friendly tableware to straw-free drink lids.

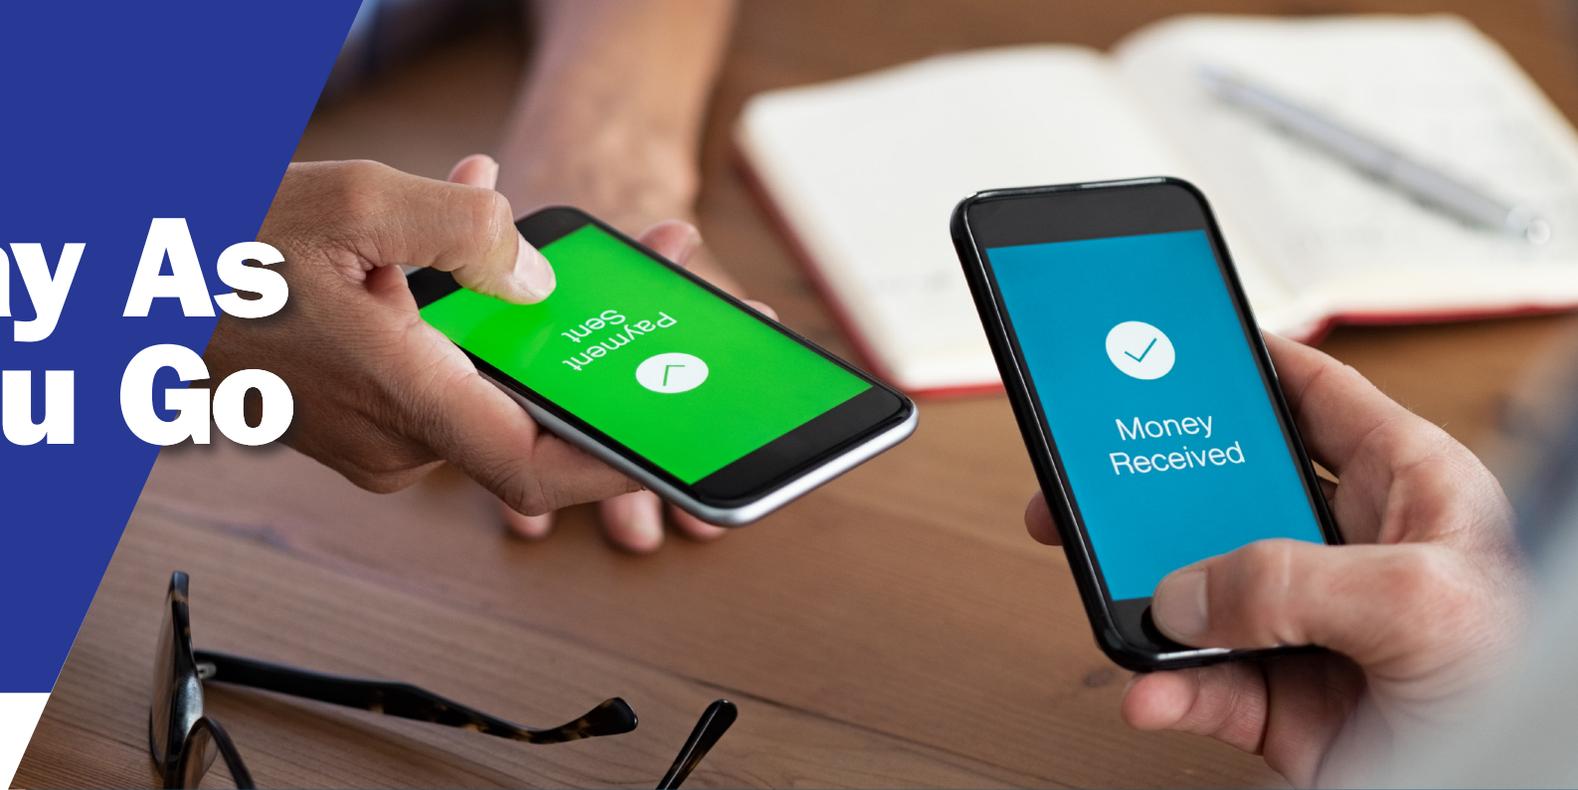

OPERATOR IDEAS

Capitalize on the grab-and-go, takeout and delivery service trends by using – and advertising your use of – compostable, biodegradable containers and packaging with ethical appeal.

U.S. firm MonoSol has developed an edible, water-soluble containers for single servings of drink mixes, oatmeal and more. Look for more innovative solutions just over the horizon!

Cafeteria style foodservice operators can easily replace single-use plastics with planet-friendly products including reusable bamboo plates, paper straws, and compostable flatware, such as from entegra’s suppliers VerTerra and Eco Products.

Pay As You Go

The research firm First Data reported seventy-five percent growth in smartphone-enabled payments for services through apps like Apple Pay, Android Pay and Samsung Pay. The growth was seen mostly in the quick service sector, including foodservice locations. Business Insider magazine predicts that by 2025, seventy-five percent of all transactions will be cashless.

This trend makes sense when you consider how convenient this service is to customers with smartphone devices. Paying becomes as easy as the touch of a button, with options to track transactions all in one place on your phone.

In addition, online security has become more trustworthy in the past decade and is now considered standard for financial transactions across all business segments. Passcodes and fingerprint or facial recognition make payment by device more secure than carrying cash or credit cards.

OPERATOR IDEAS

Implementing mobile payment requires planning and training. For a quick primer on best practices visit <https://www.mobilepaymentstoday.com/articles/ten-best-practices-for-implementing-mobile-into-retail-operations/>.

Mobile payment simplifies pop up operations! Combine with another food trend to test out trendy new offerings.

Combine mobile pay with online, app or kiosk ordering to capture sales among Gen Zers, who enjoy a fast-paced, grab-and-go lifestyle. Eighty percent of businesses that implement mobile pay see an increase in spend.

4 Tea Gets Trendy

Not since the Boston Tea Party in 1773 has there been so much excitement over tea! Americans are not new to the beverage, but it is now beginning to garner the reverence that coffee has long enjoyed. With its many varieties, applications, and health benefits, tea is being showcased with craft tea blending, nitro tea on tap and even tea-based cocktails. The introduction of nitrogenated coffee into the market led almost immediately to the same application in tea. The nitrogen produces a resemblance to stout, with cascading bubbles, a thick head and a creamy mouthfeel. Another emerging trend is the enjoyment of cheese tea, an import from Taiwan that features a topping of melted cream or cottage cheese blended with whipping cream, milk, and salt on black, green or floral tea.

OPERATOR IDEAS

Promote a specialty “Tea of the Week” in your operation, using point of sale signage or table tents to explain the sourcing, history and functional health benefits of particular varieties and blends.

A variety of trendy tea flavors, including Passionfruit Pineapple Organic Hibiscus, can be served as-is or as the basis for delicious alcoholic or zero-proof cocktails.

Operators might provide unfamiliar consumers with a gentle introduction to cheese tea, by offering samples aside a pop-up menu offering.

5 Desserts are Heating Up

Dessert trends are leaving behind the sugar bombs of yesteryear. A new assortment of desserts trending today highlights spicy and globally influenced flavors with added attributes like dairy-free, gluten-free, vegan, and portability. A touch of heat in sweets is a mainstay of many global cuisines. Look to such products as Mexico's Guajillo chili chocolate and Chamoy sauce or to North African harissa sauce (made with jalapenos). These foods incorporate sweet and sour flavors with spice infusions.

"Millennials grew up eating Flamin' Hot Cheetos," quips Trend Insights Manager Melina Romero, explaining the generation's preference for heat; she predicts that spicy will merge with fermentation to produce the next trend in the dessert category.

OPERATOR IDEAS

Spice up your house-made ice cream with your choice of spicy flavors! A shop in Seattle adds spicy heat to vegan ice cream with turmeric and black pepper along with ginger to produce a distinctive flavor profile.

Traditional use of chamoy sauce includes pairing it with a variety of fruits. Offer a dessert dipping plate with cut mango, pineapple, strawberries and more with a bowl of chamoy for a spicy-sweet delight!

Add Guajillo chili to any chocolate dessert! Make a spicy hot chocolate cake or utilize these flavors in portable desserts like cupcakes and cookies.

Out with the Old

With diners more eager than ever to expand their culinary vocabulary, chefs will look to replace typical ingredients with fresher faces this year. Look for easier access to more exotic citrus varieties like kumquat, pomelos, and ugli fruit. Meyer lemons, sweeter and less acidic than traditional varieties, will appear in salads and desserts. Kale will take a back seat to new drivers like dandelion greens, sorrel and amaranth. Consumers will continue to seek out alternatives to sugar this year, with honey and agave yielding to sweeteners derived from golden beet, sweet potato, butternut squash and carrot. Herbs making their debut on the main stage this year include savory in both the peppery summer and piney winter varieties, lemon verbena and seeds of the white caraway flower.

OPERATOR IDEAS

Related to buckwheat and rhubarb, sorrel leaves brighten dishes with a lemony tang. It is easy to grow, and homegrown ingredients appeal to the seed-to-table and transparent sourcing trends.

Ugli fruit gives a delicious Caribbean twist to ice cream or cheesecake topping.

An East Asian citrus fruit, yuzu is still not very well known in the United States. Its sweet and tangy flavor add a fresh, new twist to cocktails, sauces, salads and spreads.

7 Not So Sweet

Customers are purposefully seeking out more nutritious and powerful diet choices, especially in a non-commercial setting. Popular keto, paleo and the newly emerging pegan (paleo+ vegan) diets are driving millennials and Gen Z away from processed sugars and changing their tastes away from the sugary trends of previous decades. As consumers pay more attention to the nutritional and wellness function of foods, they are swapping out traditional and artificial sweeteners in favor of clean, organic and lower glycemic index (GI) sweeteners. Spicy and savory are becoming the preference over sweet flavors.

OPERATOR IDEAS

Try monk fruit extract in place of sugar in drinks and snacks. It's 300 times sweeter than sugar and low in GI, making it a healthy, low-cal alternative!

Serve shredded coconut macaroons dipped in spicy dark chocolate or nut butters for a naturally sweet, clean dessert or snack.

Look for lower sugar beverages. Entegra supplier Pepsico has committed to reducing sugar in its line of bottled beverages, including sodas, Gatorade and Lipton teas. Create your own sodas with more healthy, low sugar options. Carbonation systems like Sodastream allow operators to make unique flavors based on regional and age-group tastes, and reduce plastic waste of bottled drinks at the same time.

Snack On Fat

The Keto diet – a low-carb, fat-heavy diet designed to stimulate the body’s burning of stored fat – is all the rage, and consumers are looking to supplement meat and egg staples with grain-free, paleo and vegan friendly ingredients. Familiar favorites like avocado and almond butter will be joined by high-protein, low-carb combinations like coconut butter-filled chocolates, Brazil nuts and mozzarella sticks wrapped in cured meat. Producers are developing keto-friendly snack bars with medium-chain triglycerides (a healthier fat), oil and powders. Love Good Fats, for example, sells bars in flavors like mint chocolate chip and peanut butter and jelly.

OPERATOR IDEAS

Try offering house-made “fat bombs.” These simple, keto-friendly treats combine a few clean ingredients rolled into a ball. Frozen sweet bombs might feature nut butters dusted with cocoa powder, and a savory version might use cream cheese and avocado with a blend of spices.

For the keto-sacking crowd, combine ghee, clarified butter originally from Indian cuisine with sweet or savory spices for a delicious popcorn topping.

Trendy “butter coffee” combines butter and coffee in a blender, infusing the drink with a milk-saturated taste. The fats digest slowly, releasing energy gradually throughout the day. Try a vegan alternative with coconut oil and a dash of maple syrup!

Lower the Proof

With an increased awareness of the functional (nutrition and wellness) values of food and drink, Gen Z is turning away from alcohol use. Social media platform Pinterest reports an increase of 746% in the search term “sober living,” and 45% of millennials surveyed by Mintel expressed a willingness to give up alcohol to improve their health. Young people want to enjoy the bar scene, but more for the experience than for alcohol. Like in food, their focus is on quality ingredients, unusual flavors and visual appeal.

OPERATOR IDEAS

Offer a lineup of healthy non-alcoholic shots!
For example, producer KOR Shots combines coconut water, fruit juices and functional ingredients like activated charcoal, turmeric, apple cider vinegar and ginger.

Punch up fruity cocktails with herbs and spices and less or no alcohol. Southern Living magazine suggests mocktails like vanilla rosemary lemonade and citrus tea with cloves.

Create Instagram-worthy drinks. Beautiful bar drinks bring people back. Add house-made ice cubes filled with berries or mint leaves to well drinks, like gin and tonic. Top off cocktails with edible flowers, fruit or even non-edible decorations.

10

Waste Not

Consumers want nothing to go to waste: not their time, not their money and not the planet's resources. In addition to the trending movement away from single-use plastics, an emerging concern in 2019 is the waste of food itself in the form of uneaten leftovers, spoiled produce, parings and so-called “ugly food” – discolored, blemished or oddly shaped produce. The James Beard Foundation reports that nearly one third of food grown worldwide goes to waste somewhere along the line from farms to markets to restaurants to households. This translates to a per person cost of \$1500 to \$1800 per year!

OPERATOR IDEAS

Explore food waste recycling programs in your area. California Safe Soil in Sacramento, for example, is a growing company with operations that use a patented enzymatic digestion process to turn fresh food waste into fertilizer and animal feed.

Adopt a seed-to-table approach to produce sourcing. Advertise local producers or, better yet, grow your own in backyard, rooftop or window box gardens.

Values-driven consumers want to put their money where their values lie. Adopt—and advertise—a commitment to nose-to-tail and root-to-leaf ingredient usage.
